mobile intelligence

Mobile Number Verify

Verify your customer's mobile number instantly and securely.

Sekura Mobile Number Verify delivers faster and more secure verification of the phone number of the mobile device being used to access a service, powered by verified data direct from the mobile operator.

Significantly speeds up the user registration process on mobile with improved UX that removes the need for user interaction while enabling passwordless login, secure user onboarding and anti-fraud checking flows.

Faster and Secure

Faster and more secure mobile number authentication using mobile network verified data (even when roaming) without the need to trade security for improved customer experience.

Seamless Experience

Frictionless experience for users (no SMS codes to key in) enables additional revenues by avoiding legitimate requests from being blocked.

Multiple Use Cases

Verify new users at time of onboarding, deliver a key 2FA passwordless login component or enable anti-fraud checks, all through one API call.

The simple and secure mobile user verification solution your customers want.

Key Capabilities

- >> **Faster User Registration**
Significantly speeds up the user onboarding process by removing the need for one-time passcodes.
- >> **Inbuilt mobile security**
More secure mobile number 2FA verification by using the mobile network; no need to trade security for improved customer experience.
- >> **Increased Revenues**
Enhanced convenience and seamless UX enables additional revenue for service providers.
- >> **International Coverage**
Sekura single API enables Verify service from multiple operators worldwide.

Use Cases

- >> **User Verification**
Digital service providers can verify a user-provided mobile number in real-time within an account registration flow to quickly verify the user.
- >> **Passwordless Login**
As part of the service provider login flow, mobile number is used to provide a mobile user identifier, as part of a two-factor login flow, without requiring any end-user interaction.
- >> **Anti-Fraud Checks**
Service providers can use Number Verify to run background anti-fraud checks, e.g. to confirm that the device being used belongs to the account holder.

Why Sekura Mobile

- >> **Simple but Secure**
Sekura mobile APIs are built to ensure that, in a complex world, we keep things simple yet secure for you and your customer.
- >> **Easy to Deploy**
The Sekura Mobile Number Verify service is a part of our suite of secure, simple and standards-based API-driven services. Easy to integrate into your existing customer flows.
- >> **Support that Cares**
Our expert operational support team are focused on ensuring the best services and fastest resolution of any challenge you throw at them.
